1.5"X5"X4"

Shipping Weight:  
1.75 lbs.

# Meridian Digital Centrex Custom Ringing Options

**DSI-375**

**Digital Signal Indicator**

## DSI Creates Greater Flexibility for your Meridian Business Set

The DSI-375 equipped with a distinctive variable frequency electronic ringer and contact closure for loud ringing and "off-hook" applications, customizes the ringing performance and enhances the functionality of the Business Set.

### **CAN YOU ALWAYS HEAR YOUR PHONE RING?**

#### **Set Idle (off-hook)**

Make normally non-ring lines ring with a single keystroke. Especially important if you wear a headset or answer your boss's phone.

#### **Amplifying The Second Call Alert Tone**

The MBS identifies a second incoming call by delivering a single 2 second tone to the Business set. Often this 2 second tone is just not loud enough. The DSI can be configured to repeat the tone, only

louder or if you wish, using a different tone.

### **HAVE YOU EVER MISSED THE SECOND CALL?**

#### **Set Busy "off-hook"**

When the MBS is "off-hook" i.e. you are on the phone, it announces a second incoming call with a single beep tone.

If the user requires normal ringing, the DSI is the perfect solution.

All lines or only selected lines can be made to ring, any tone or cadence can be selected.

This feature is particularly important if you wear a headset, because the phone is always "off-hook".

### **DO YOU KNOW WHEN YOUR BOSS IS ON THE PHONE?**

An added feature is the DSI's ability to light a lamp anytime a "Make Set Busy" feature is activated.

### **ARE YOU IN A LARGE OR NOISY AREA?**

#### **Simultaneous Ringing**

A handy way of providing extension ringing, this DSI feature

allows the user to locate an extension an extension bell anywhere he or she wants. Use the programmable ringer included with the DSI or connect an external bell to the Aux Jack.

The DSI was designed to operate with Dees' Model 198 Loud Ringer.

### **"Off-hook" Busy Indicator**

Use this feature to light a lamp whenever the Meridian Business Set is "off-hook".

The DSI is equipped with a set of contacts which can be configured to close anytime the handset on the MBS is lifted or the speakerphone is in use.

In many cases, this feature is the only way of providing visual indication that the user of the MBS is actually on the phone.

### **WHO'S PHONE IS IT?**

#### **Distinctive Tone Selection**

The DSI will allow the user to select any of 5 different tones or 2 cadences (single ring or split tone). A perfect solution for busy offices.
