Phone 2PC Recording Solution

The *Phone 2PC Recording Solution* is a Windows based single line application that provides a cost-effective means of recording all calls or selective recording of calls. A simple click on a Window's icon will give you Record-On-Demand or it can be set up with "voice activation" which will automatically record all of your calls. This software solution runs on your PC without the need for any other equipment.

There are two components to the *Phone 2PC Recording Solution*, a hardware interface component that couples your phone line into your computer's sound card and a Graphical User Interface (GUI) that provides easy use of the application.

Features/Functionality:

Interface Unit

- Easy computer sound card to handset interface
- Works with both analog & digital phone systems
- Powered by an AC adapter or optional Game Port

Software

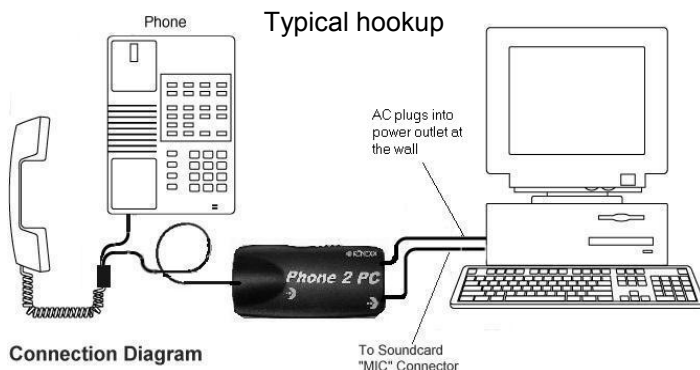

- Easy to use GUI
- Compatible with any MS Windows Operating System
- Calls are stored as wav files
- Uses GSM 6.10 compression algorithms
- 1 hour of recording time = approx. 7.2MB
- * Voice annotation

The *Phone 2PC Recording Solution* gives you some very powerful system features typically only found in much larger systems.

- Recorded files may be e-mailed
- Recorded files may be stored on local drive or archived on network server
- Auto file naming, auto time/date stamping
- Easy query to find a recording
- Voice annotation, at beginning or end or recording
- Bookmarks can be inserted during recording

Applications include areas where recording is necessary for Compliance, Performance or Risk management, i.e. Public Safety, banking, help desks, inbound/outbound telemarketing, legal, or insurance.

Call us to find out how the *Phone 2PC Recording Solution* can help you in your call monitoring applications using the CM-30's.
